Pomoc_LAB_3

Spróbuj wykonać punkty 1-6, a jeśli nie idzie zamiast ggplot2 użyj qplot (tworzenie grafiki)

- 1. >install.packages("ggplot2")
- 2. >library(ggplot2)
- 3. >facebookData<-read.delim("FacebookNarcissim.dat", header=TRUE)
- 4. >graph<-ggplot(facebookData, aes(NPQC_R_total, Rating))
- 5. >graph+geom_point(aes(colour=Rating_Type))
- 6. >graph

Tworzenie wykresu scatterplot()

- 1. examData<-read.delim("Exam Anxiety.dat", header=TRUE)
- 2. scatter<-ggplot(examData, aes(Anxiety, Exam))
- 3. scatter+geom_point()
- 4. scatter+labs(x="Exam Anxiety",y="Exam performance%", colour="Gender")
- 5. scatter
- 6. scatter+geom_smooth(method="lm", colour="Red")
- scatter

Tworzenie histogramu

- 1. >festivalData<-read.delim("DownloadFestival.dat", header=TRUE)
- 2. >festivalHistogram<-ggplot(festivalData, aes(day1)) + opts(legend.position="none")
- 3. >festivalHistogram+geom_histogram()+labs(x="Hygiene (Day 1)", y="Frequency")
- 4. >festivalHistogram

Tworzenie wykresu skrzyneczkowego (Boxplots)

- 1. >festivalBoxplot<-ggplot(festivalData, aes(gender, day1))
- 2. >festivalBoxplot+geom_boxplot()+labs(x="Gender",y="Hygiene(Day 1 of festiwal)")
- 3. >festivalBoxplot

Tworzenie wykresu gęstości prawdopodobieństwa (rozkładu prawdopodobieństwa)

- 1. >density<-ggplot(festivalData, aes(day1))
- 2. >density+geom_density()+labs(x="Hygiene (Day 1 of fest.)", y="Density Estimate")
- 3. >density

Tworzenie wykresów słupkowych (Bar charts)

- 1. >chickFlick<-read.delim("ChickFlick.dat", header=TRUE)
- 2. >bar<-ggplot(chickFlick, aes(film,arousal, fill=gender))
- 3. >bar+stat_sumary(fun.y=mean, geom="bar", position="dodge")
- 4. >bar

Wykresy liniowe (line graphs)

- 1. >hiccups<-read.delim("Hiccups.dat", header=TRUE)
- 2. >hiccups<-stack(hiccupsData)
- 3. > names(hiccups)<-c("Hiccups", "Intervention")
- 4. >hiccups\$Intervention_Factor<-factor(hiccups\$Intervention, levels=hiccups\$Intervention)
- 5. >line<-ggplot(hiccups, aes(Intervention Factor, Hiccups))
- 6. >line+stat_summary(fun.y=mean, geom="point")
- 7. >line
